# Science and Engineering Practices

1. Asking questions and defining problems
2. Developing and using models
3. Planning and carrying out investigations
4. Analyzing and interpreting data
5. Using mathematics and computational thinking
6. Constructing explanations and designing solutions
7. Engaging in argument from evidence
8. Obtaining, evaluating, and communicating information

New York State P-12 Science Learning Standards		
18. Structure and Properties of Matter		
<b>HS-PS-1-1</b> Use the periodic table as a model to predict the relative properties of elements based on the patterns of electron to the inherent energy level of atoms. (Clarified Indicator: Changes in pattern for chemical periodic trends occur from those elements of groups 1 and 2 to those elements of groups 16 and 17. (Elementary Secondary Assessment is limited to the elements of groups 1 and 2.))		
<b>HS-PS-1-2</b> Plan and conduct an investigation to gather evidence to compare the structure of substances at the bulk scale, to infer the strength of electrical forces between particles. (Clarified Indicator: Students are required to compare the structure of substances at the bulk scale to the structure of particles at the molecular and atomic scale.)		
<b>HS-PS-1-3</b> Develop models to illustrate the changes in the composition of the nucleus of the atom and the energy released during the processes of fusion, fission, and radioactive decay. (Clarified Indicator: Fusion is an exothermic reaction, such as proton or deuterium, and the rate of energy released in nuclear processes relative to other kinds of transformations.)		
<b>HS-PS-2-4</b> Communicate scientific and technical information about why the particulate-level structure is important in the functioning of designed materials. (Clarified Indicator: Students should be able to explain how the structure of materials at the particulate level affects their properties. Examples of materials include polymers, composites, nanomaterials and other kinds of solids. Models for solids include the atomic scale, the molecular scale, and the bulk scale.)		
<b>HS-PS-1-4</b> Analyze data to support the claim that the combined gas law describes the relationships among volume, pressure, and temperature for a sample of an ideal gas. (Clarified Indicator: Real gases are treated as ideal gases for the purposes of the standard.)		
<b>HS-PS-1-5</b> Use evidence to support claims regarding the formation, properties and behaviors of solutions at bulk scales. (Clarified Indicator: Examples of materials that form solutions include ionic, molecular, and gas phase solutions. Information on an aqueous solution includes the chemical formula, the chemical equation, and the chemical equation for a reaction.)		
Science and Engineering Practices	Disciplinary Core Ideas	Crosscutting Concepts
<b>1. Asking Questions and Defining Problems</b> Asking questions and defining problems is central to science. It is a skill that is used to generate ideas for investigation and to define the focus and scope of the investigation. It is a skill that is used to generate ideas for investigation and to define the focus and scope of the investigation. It is a skill that is used to generate ideas for investigation and to define the focus and scope of the investigation.	<b>PS.1. Structure and Properties of Matter</b> All matter is made of particles. Matter is made of atoms and molecules. Atoms and molecules are made of particles. The particles are in constant motion. The particles are in constant motion. The particles are in constant motion.	<b>Structure and Properties</b> Structure and properties of matter are related. The structure and properties of matter are related. The structure and properties of matter are related.
